Thornbury Analytics

Confidential Information Memorandum

B2B Software — Insurance Technology / Pricing and Risk Analytics

United Kingdom

SYNTHETIC TEST FIXTURE. This company does not exist and every figure in this document is invented.

1. Executive Summary

Thornbury Analytics provides subscription software that helps mid-market insurance brokers price and monitor commercial risk. The platform ingests policy and claims data, applies the company's proprietary scoring models, and returns pricing guidance and portfolio exposure reporting.

FY24 revenue from continuing operations of £15.1m, representing growth of 31% over the prior year.

Commercial broking remains substantially manual. Pricing decisions rely on individual underwriter judgement, with limited portfolio-level visibility of accumulating exposure.

A hosted platform replacing spreadsheet-based rating with governed, auditable models, deployed alongside existing policy administration systems rather than replacing them.

Contracts are typically written on three-year terms with annual uplift provisions linked to a published inflation index, subject to a stated cap. Renewal is by default rather than by re-tender.

The company raised £6.5m in a Series A round in 2019 and a further £14.0m in 2022. Both rounds were led by institutional investors who remain on the register.

Board meetings are held monthly against a standing agenda. Committee structures are limited to an audit committee.

Adoption in the Benelux region is judged to lag the United Kingdom by approximately three years, which management presents as a timing opportunity rather than a structural difference.

Engineering, product and customer success functions are organised into cross-functional teams aligned to customer segments rather than to components of the platform.

The largest single account contributes £2.1m of annual recurring revenue and has been a customer since 2018. No other account exceeds six per cent of the total.

The company raised £6.5m in a Series A round in 2019 and a further £14.0m in 2022. Both rounds were led by institutional investors who remain on the register.

The company maintains a delegated authority matrix reviewed annually by the board.

Management sizes the addressable market at £4.2bn, comprising commercial broking technology spend across the United Kingdom, Ireland and the Benelux region.

2. Investment Highlights

Gross revenue retention. Gross revenue retention of 94% in FY24

Net revenue retention. Net revenue retention of 118% in FY24

Customers. 214 enterprise customers as at 31 December 2024

Top 10 customer concentration. The top ten customers represent 31% of ARR

Average contract value. Average contract value of £66k

Employees. 126 full-time employees across two offices

Deployment measured in weeks rather than quarters; no replacement of the incumbent policy system; model governance reporting aligned to FCA expectations.

Contracts are typically written on three-year terms with annual uplift provisions linked to a published inflation index, subject to a stated cap. Renewal is by default rather than by re-tender.

The company raised £6.5m in a Series A round in 2019 and a further £14.0m in 2022. Both rounds were led by institutional investors who remain on the register.

Adoption in the Benelux region is judged to lag the United Kingdom by approximately three years, which management presents as a timing opportunity rather than a structural difference.

Engineering, product and customer success functions are organised into cross-functional teams aligned to customer segments rather than to components of the platform.

The largest single account contributes £2.1m of annual recurring revenue and has been a customer since 2018. No other account exceeds six per cent of the total.

The company raised £6.5m in a Series A round in 2019 and a further £14.0m in 2022. Both rounds were led by institutional investors who remain on the register.

The company maintains a delegated authority matrix reviewed annually by the board.

Management sizes the addressable market at £4.2bn, comprising commercial broking technology spend across the United Kingdom, Ireland and the Benelux region.

Release cadence is fortnightly, with feature flags used to stage changes across the customer base. Rollback is automated.

A land-and-expand motion is evident across the broker groups, where an initial deployment in one trading division typically extends to two or three further divisions within eighteen months.

The largest contract signed to date carried total contract value of £3.4m across a five-year term.

3. Business Overview

A hosted platform replacing spreadsheet-based rating with governed, auditable models, deployed alongside existing policy administration systems rather than replacing them.

Expansion within existing broker groups, entry into the Irish and Benelux markets, and a claims analytics module scheduled for release in the second half of FY25.

Contracts are typically written on three-year terms with annual uplift provisions linked to a published inflation index, subject to a stated cap. Renewal is by default rather than by re-tender.

The company raised £6.5m in a Series A round in 2019 and a further £14.0m in 2022. Both rounds were led by institutional investors who remain on the register.

Board meetings are held monthly against a standing agenda. Committee structures are limited to an audit committee.

Adoption in the Benelux region is judged to lag the United Kingdom by approximately three years, which management presents as a timing opportunity rather than a structural difference.

Engineering, product and customer success functions are organised into cross-functional teams aligned to customer segments rather than to components of the platform.

A land-and-expand motion is evident across the broker groups, where an initial deployment in one trading division typically extends to two or three further divisions within eighteen months.

The largest contract signed to date carried total contract value of £3.4m across a five-year term.

No related party transactions have been identified beyond directors' remuneration disclosed in the statutory accounts.

Industry consolidation among brokers has produced larger groups with more complex portfolios, which management identifies as the primary structural driver of demand.

Onboarding a new customer takes six to ten weeks, of which the majority is spent on data mapping rather than on configuration.

The company sells directly in its home market and through two referral partners in continental Europe. Partner-originated business carries a commission recognised over the life of the contract.

Deferred income at the most recent year end stood at £5.8m, reflecting the annual-in-advance billing convention applied to the majority of subscription contracts.

The company maintains a delegated authority matrix reviewed annually by the board.

The competitive set divides between incumbent policy administration vendors extending into analytics, and smaller specialists. The company positions itself in the latter group.

Appendix G — Insurance Cover

Contracts are typically written on three-year terms with annual uplift provisions linked to a published inflation index, subject to a stated cap. Renewal is by default rather than by re-tender.

The company raised £6.5m in a Series A round in 2019 and a further £14.0m in 2022. Both rounds were led by institutional investors who remain on the register.

Board meetings are held monthly against a standing agenda. Committee structures are limited to an audit committee.

Adoption in the Benelux region is judged to lag the United Kingdom by approximately three years, which management presents as a timing opportunity rather than a structural difference.

Engineering, product and customer success functions are organised into cross-functional teams aligned to customer segments rather than to components of the platform.

The largest single account contributes £2.1m of annual recurring revenue and has been a customer since 2018. No other account exceeds six per cent of the total.

The company raised £6.5m in a Series A round in 2019 and a further £14.0m in 2022. Both rounds were led by institutional investors who remain on the register.

The company maintains a delegated authority matrix reviewed annually by the board.

Management sizes the addressable market at £4.2bn, comprising commercial broking technology spend across the United Kingdom, Ireland and the Benelux region.

Release cadence is fortnightly, with feature flags used to stage changes across the customer base. Rollback is automated.

A land-and-expand motion is evident across the broker groups, where an initial deployment in one trading division typically extends to two or three further divisions within eighteen months.

Appendix H — Environmental, Social and Governance

Contracts are typically written on three-year terms with annual uplift provisions linked to a published inflation index, subject to a stated cap. Renewal is by default rather than by re-tender.
